Annex A

Products Definitions:

1. **IDV (FAKA-BOS)-** The authentication process of the ID. The processing includes the following stages: (A) Qualification – AU10TIX IDV assesses whether the image quality meets the minimal standards required for successful processing. It also determines whether or not the image is an ID. (B) Optimization – The image is optimized to compensate for any deficiencies in the image quality. This involves, for example, straightening the alignment and sharpening the image. (C) Classification – The ID is automatically classified by country/state of issue and by document type (e.g., Passport, Driver's License, ID Card) and version number. This is done by comparing the submission to our extensive catalog of Format Profiles which contains detailed information about the structure and format of various ID types. This classification enables the system to proceed with the data extraction and authentication tests. (D) Data Extraction - The data shown on the ID is extracted field by field using the AU10TIX sophisticated OCR (Optical Character Recognition) engine. Each data element is identified separately (e.g., Name, Date of Birth, Place of Birth, etc.) based on the Format Profile for that ID type. This enables the execution of a wide range of tests to verify the validity of the information given in each field. AU10TIX offers an option to optimize the data extraction process by comparing the OCR results with ID information submitted by the customer in his/her application form. (E) Authentication Tests - AU10TIX uses the information gathered in the previous stages to run a series of sophisticated authentication tests. This exhaustive series of tests can discover a wide range of falsification methods that may have been applied to the ID, including both manual and digital doctoring of the text or photo. For more information please see AU10TIX- Credetional (IDV) policy [Credential-IDV-Policy-2024.pdf](#) and also you may find it on AU10TIX website on the link: <https://www.au10tix.com/downloads/>
2. **Exception Management (FAKA-Double Check)-** Exception Management is an advanced onboarding technology that integrates IDV AI automation and manual verification to enhance both operational efficiency and regulatory compliance. The service shall be available on a 24/7 basis for Latin-based language documents. SLA for the Exception Management API Calls will include a response time of up to 5 (five) minutes per API Call ("SLA Requirement") provided such number shall not exceed 10% of the Minimum Commitment API Calls as defined in the Service Order ("SLA Cap"). Once the API Calls exceed the SLA Cap, Au10tix shall use reasonable commercial efforts to process any API Calls for Exception Managamnet services within the above SLA Requirement. If the Customer wishes to purchase such a number of API Calls exceeding 10% of the Minimum Commitment, it may do so subject to the issuance of an additional minimum volume commitment, and in such event, the SLA Requirement shall be further subject to the parties agreeing on a mutual ramp-up plan to adjust the Exception Managamnet specialist resources. For more information please see AU10TIX- Credetional (IDV) policy [AU10TIX-Credential-IDV-Policy-March-2024.pdf](#) and also you may find it on AU10TIX website on the link: <https://www.au10tix.com/downloads/>
3. **POA-** AU10TIX uses OCR to extract the name and address and verifies that the name in the document matches the name shown in the ID.
4. **Serial Fraud Monitor (FAKA- INSTINCT)-** Serial Fraud Monitor is the 2nd line of defense to IDV. It focuses on the detection of sophisticated ID forgeries that cannot be detected at case-level analysis. Such professional forgeries are often attempted by highly

skilled professionals and organized crime. Serial Fraud Monitor examines anomalies at the traffic level, monitoring swarm attacks using multiple variants of the same document, using various combinations of image and content elements. Serial Fraud Monitor Consortium hashed information is compared against indicators of the history of all consortium members (Hence detection by one Consortium member helps flag a similar attack on another Consortium member. For more information please see AU10TIX-Credetional (IDV) policy [AU10TIX-Credential-IDV-Policy-March-2024.pdf](#) and also you may find it on AU10TIX website on the link: <https://www.au10tix.com/downloads/>

5. **Console-** The Console app is a web application for use by customer employees to upload documents for ID verification as well as to provide contact details for contact self-service document upload requests. The application enables a review of the progress and results of these requests.
6. **Webview SDK-** The AU10TIX WebView SDK gathers user identification data for further authentication performed by the AU10TIX backend service.
- Mobile SDK-** The mobile SDK libraries for Android and IOS assist native mobile app developers to utilize the device capabilities to create good quality inputs to the AU10TIX API. The SDK is a standalone independent product that does not interact with the AU10TIX Identity Verification service. The hosting app is responsible for using the SDK to create quality images and use them as input when calling the AU10TIX API. The SDK enables the following features: Scan document, Selfie, Liveness, and Barcode. Mobile SDK service is being licensed only for capturing images/IDs to be processed by AU10TIX's authentication Services. Any use of these services for other capturing uses is prohibited, including but not limited to integrating the SDK into systems, applications, or processes that involve the transfer of information to entities other than AU10TIX.
7. **Secure.Me-** The Secure.me application is a white-labeled AU10TIX hosted webpage designed to enable automated end-user identity verification. The webpage is versatile, and dynamic based on the customer preferences, and configurations are managed through the Secure.me Console. There are two typical Secure.me integration solutions: 1. Integration-free: If integration into your existing system(s) is not feasible, you can choose to utilize the AU10TIX Console portal to trigger a request for identity verification to your endusers. This request will be delivered as an SMS or email. The ID capture and verification will be performed through your customized Secure.me landing page. Choosing this solution allows for a faster time to market since there is no required technical integration. 2. API Integration(Server-to-Server): Utilizing the Secure.me API, a document submitted by your end-user will be routed through your company's back-end server for identity verification by AU10TIX. With this solution, document information can be captured either via your application website (Direct Integration) or through our hosted landing page that can also be embedded as an iFrame.
8. **PII verification** - PII (Personally Identifiable Information) verification is the process of confirming the accuracy and legitimacy of personal data provided by individuals for identification purposes. This data includes sensitive information such as names, addresses, dates of birth, social security numbers, and other unique identifiers. Au10tix primary objective of PII verification is to ensure that the information provided matches official records and can be trusted for authentication and authorization purposes.

9. **AML Screening** – Au10tix AML screening service is a tool used by organizations to screen individuals and businesses against various watch lists or sanction lists maintained by government agencies, international organizations, and regulatory bodies. These watch lists include individuals, entities, or countries that are subject to legal or regulatory restrictions due to their involvement in illicit activities such as terrorism, money laundering, fraud, or other criminal offenses. The primary purpose of Au10tix AML screening service is to identify and flag any matches between the entities being screened and the entries on the watch lists. This will indicate the customer if further investigation or action is needed and also to mitigate risks and ensure compliance with legal and regulatory requirements. In order to provide the AML screening services please see Lexis Nexis Service T&C's in the link: <https://www.au10tix.com/downloads/>
